A Phase diagram at $T = 0$
one game
average of 3 games
coin flips
$\alpha_c = 0.3374$
minimum 0.14
at $\alpha \approx 0.35$
volatility per agent σ^2/N
histories per agent $\alpha = P/N$
B Temperature at $\alpha \approx 0.1$
one game
average of 3 games
greedy game, $T = 0$
random choice, $T = \infty$
coin flips
volatility per agent σ^2/N
temperature T
