A Phase diagram of the greedy game
volatility per agent σ_A^2/N
histories per agent $\alpha = P/N$
one game
average of 3 games
coin flips
minimum 0.14
at $\alpha \approx 0.35$
B Temperature at $\alpha \approx 0.1$
volatility per agent σ_A^2/N
temperature T
one game
average of 3 games
greedy game
random choice, $T = \infty$
coin flips
