each episode day, with probability p_{neg}
jump episode
starts with probability ϵ
lasts $\text{Poisson}(\lambda)$ days
each episode day, with probability $1 - p_{\text{neg}}$
no episode under way
emission of state k
$\mu_k + \sigma_k T_\nu$
1
2
k
$N-1$
N
most negative states $\mathcal{S}_-$
ordinary day: step with $\hat{\mathbf{P}}$
most positive states $\mathcal{S}_+$
higher growth rate
