each episode day, prob. slightly above $\frac{1}{2}$
episode starts, prob. ϵ
lasts Poisson(λ) days
each episode day, prob. slightly below $\frac{1}{2}$
no episode under way
emission of state k
$\mu_k + \sigma_k T_\nu$
step with $\hat{\mathbf{P}}$, prob. $1-\epsilon$
1
2
$\cdots$
k
$\cdots$
$N-1$
N
most negative states
higher growth rate
most positive states
